*"We consider you a trusted partner in supplying safety-critical assemblies used in our elevator control systems."*

## About Us

### Our Approach

We understand you're looking for solutions to complex problems. You want precision-made components that perform exceptionally well and are delivered on time and on budget.

At California Brazing/Nevada Heat Treating, we begin every project, no matter how simple or complex, with understanding your objectives. We then create a plan, including options, timelines and costs, and implement it, making any necessary adjustments along the way. We also look for ways to continuously improve the process.

From heat treating and brazing, to component development and turnkey manufacturing, we have the capacity, experience and flexibility to give your products the competitive edge.

### Our Team

Building successful, long-term relationships comes naturally at California Brazing/Nevada Heat Treating. It starts with our dedicated staff, including engineers, metallurgists, technicians, machinists, and a core management team that has worked together for more than a decade.

To ensure every client receives exceptional customer service, our team is comprised of people with diverse experience and educational backgrounds. The members of our team are recognized experts, and several of our team members hold leadership positions in industry organizations.

## Turnkey Manufacturing

### Comprehensive Solutions That Put You In the Lead

Higher quality, faster time to market and better value is what you'll get from California Brazing/Nevada Heat Treating's turnkey manufacturing solutions. We can do it all inside our fully-equipped, state-of-the-art facilities, from prototyping to supply chain management—and everything in between.

Each project is a collaborative effort that begins with a thorough understanding of your product needs, and ends in meeting your business objectives. We have the technical expertise, creativity and attention to detail required to tackle even your most complex manufacturing challenges.

Our proven processes allow you to capture new markets and out-pace your competitors through flexible, lean manufacturing that produces higher quality products--more quickly and economically. We'll turn your great ideas into exceptional products through:

- Assembly and testing
- Supply chain management
- Planning and tools such as MRP
- Rapid and comprehensive support during new product introduction
- Prototyping
- Innovative solutions to metallurgical and design challenges
- Design for manufacturability and cost reduction
- Process development, verification and improvement
- Knowledge and support of critical outside processes
- Tooling and fixturing
- Defining and implementation of test verification methods and plans
- Failure analysis
- Proficiency in numerous software applications, including Solidworks and AutoCAD
