

Client: California Brazing

Project Summary: This client specializes in advanced services for manufacturing critical components. Through MacWest Marketing, I provided project management and content for their new website and tagline, enabling them to combine two different geographically located companies into one online portal.

The screenshot shows the website for California Brazing and Nevada Heat Treating. The header features the company logos and the tagline "Engineering Solutions For Your Success". A navigation menu includes "Home | About Us | Our Facilities | Contact Us". The main content area has a sidebar with "Services & Solutions" (Customer & Special Process Approvals, Industries, Products & Components, Certifications) and a central image of an aircraft nose with a quote: "We can always depend on you for processing of our critical parts used in aircraft hydraulic systems." Below this are three columns: "Brazing and Heat Treating services for your metal processing needs", "Component Development and Turnkey Manufacturing", and "We have more than 50 Special Process Approvals and Certifications". A section titled "Engineering Solutions for Your Success" contains two paragraphs of text. At the bottom, there are links for "California Brazing video" and "Nevada Heat Treating video", along with logos for "TUV USA ISO9001:2000 REGISTERED" and "Accredited Nadcap".

About Us

Our Approach

We understand you're looking for solutions to complex problems. You want precision-made components that perform exceptionally well and are delivered on time and on budget.

At California Brazing/Nevada Heat Treating, we begin every project, no matter how simple or complex, with understanding your objectives. We then create a plan, including options, timelines and costs, and implement it, making any necessary adjustments along the way. We also look for ways to continuously improve the process.

From heat treating and brazing, to component development and turnkey manufacturing, we have the capacity, experience and flexibility to give your products the competitive edge.

Our Team

Building successful, long-term relationships comes naturally at California Brazing/Nevada Heat Treating. It starts with our dedicated staff, including engineers, metallurgists, technicians, machinists, and a core management team that has worked together for more than a decade.

To ensure every client receives exceptional customer service, our team is comprised of people with diverse experience and educational backgrounds. The members of our team are recognized experts, and several of our team members hold leadership positions in industry organizations.
